Eighty Eight EcoFresh HRWs for SHENZHEN Convention and Exhibition Center, China

The Shenzhen Convention and Exhibition Center, Futian district, Shenzhen, China is billed to be one of the most modern convention centers.

The fresh air requirement in the center is a colossal 2,093,700 cmh. Initial designs by a European engineering firm included Plate-Type Heat Exchangers. However, keeping in mind the need for good Indoor Air Quality (IAQ) inside the center, the project

designers opted for *EcoFresh* molecular sieve coated Heat Recovery Wheels. Thus, in order to save energy as well as maintain IAQ (Indoor Air Quality), **88 nos. EcoFresh Heat Recovery Wheels**, models HRW- 2600 (54 nos.), HRW-2200 (2 nos.), HRW-2000 (6 nos.), HRW-1800 (2 nos.), HRW-1700 (2 nos.), HRW-1500 (4 nos.), HRW-1300 (10 nos.) and HRW-800 (8 nos.) were incorporated with *McQuay and Fengshen Air Handling Units*.
